

# INSTALLATION OF YOUR SERVER ROOM WITH GREAT FLEXIBILITY

Intelligent & smart  
power panels

Complete delivery and installation from  
factory to customer.

Super efficient water cooled  
side coolers for the CUBE S.

Great racks with an impressive design and  
large possibility for customizing.

**Cabinet System has developed a  
server rack- & CUBE-concept, which  
in all modesty is everybody else  
superior.**

You can achieve large savings on your  
power consumption when you built your  
server room with a CUBE construction.  
As a rule of thumb you can typically save  
30-40% on your electricity bill, and in most  
cases there is a relatively short payback  
period for the investment.  
A server typically cost 80-100 EUR a month  
in electricity – so there is money to be saved  
even in small server rooms.

Cabinet System s cabinets and CUBE-  
constructions is superior to everybody else,  
while you freely can choose dimensions,  
functions and colors on the server racks and  
CUBE.

The CUBE can further more be adapted in  
width and height. Also the system can be  
fitted to all other types of racks, no matter  
which brand and size it is.

This means that the company can remain in  
operation during installation.
